

CVT Mission and Goals

The Cardiovascular Technology program (Invasive & Non-Invasive/ Echocardiography) recognizes that our community has an ever increasing demand for trained and competent healthcare professionals. To help meet that need, Gwinnett Technical College and the CVT program strive to implement a comprehensive curriculum to help meet that work force demand within our community. This curriculum is based in didactic work, technical lab skills and a partnership with clinical sites to provide a complete educational experience for our students.

Mission Statement

To provide the fundamental skills and knowledge that allows our students to gain entry-level employment in their chosen disciplines of Cardiovascular Technology. To achieve this goal, the program strives to prepare each student's cognitive, psychomotor and affective learning domains for invasive cardiovascular technology and adult echocardiography.

Program Goals and Outcomes

The Cardiovascular Technology program serves our communities of interest and its students through meeting and maintaining the following goals:

- Students and graduates demonstrate entry-level Cardiovascular Technology knowledge and skills gained through successful academic and clinical education
- Students and graduates will function as independent and productive Cardiovascular Technologists as part of their respective teams
- Students and graduates perform effective critical thinking and problem solving needed to succeed in their respective cardiovascular field
- Students and graduates exhibit behavioral traits expected of a health care professional
- Students and graduates are satisfied with the results of the program
- Students and graduates seek to grow professionally through professional organization membership and education
